

Empowering Greater Insights

Confidence & Insights... From Domain Area Experts to Proprietary Analytical Tools

Reliability in your risk-assessment and observational research data leads to greater insights and confidence towards successful FDA acceptance and proper use of your pharmaceutical product.

BioTrak Research gathers and analyzes reliable data through innovative Risk Evaluation and Mitigation Strategy (REMS) assessment research tools, such as **Clinmetric™ ASSESS**, *the first-ever analysis tool and database for benchmarking your REMS performance data with similar REMS programs.* Further, our domain experts not only oversee the research process, but are your personal resource to ensure the research quality, analyses, report writing and subsequent validation meet the highest standards. Our comprehensive product safety and usability research methods include:

- REMS program design, assessment and analysis solutions
- Observational research studies, including labeling comprehension, usability and user acceptance
- Commercial stakeholder communications planning, testing and development

We look forward to speaking with you about your research needs. Please contact BioTrak Research at info@biotrak.com or call 760. 448. 4820 to learn more.
